Streamlining Event Safety

WindPro Online for Wind Monitoring Across Multi-Sites

www.scarlet-tech.com

When many outdoor events happen all at once, WindPro Online is the solution to monitor wind conditions across multi-sites. This is the choice that Fons van Egmond, the founder of Production Life, has trusted.

Since 2021, Fons has incorporated Scarlet's wireless anemometers into his projects. Throughout his career in the event industry, Fons has worked with renowned clients and artists from AC/DC to Coldplay, also played a significant role in the Eurovision Song Contest 2021. Drawing from his experience, Fons expressed "I believe all outdoor events should have a tool like WindPro."

EFFICIENCY WITH DUAL-SENSOR CONNECTIVITY

WindPro demonstrates efficient wind monitoring through dual-sensor connectivity, covering a maximum wireless range of 1,000 meters. Its hassle-free installation makes WindPro suitable for various applications, as shown in the recent Amsterdam2023 event.

Production Life is an event management company based in Harmelen, Netherlands. It is expertly guided by its founder, Fons van Egmond, who has track records on working in mega-events worldwide.

Fons utilized two wind speed and direction sensors at separate locations, both connected to WindPro. He explained, "We've placed tents and structures inside and outside the stadium so we had to measure (wind) at different locations." At the same time, WindPro displayed data from both locations, allowing all safety personnel to monitor wind conditions from the control room.

▲ Complete event monitoring with 2 wind speed & direction sensors and WindPro Online across stadium

In the Amsterdam2023, Fons expertly managed stage and set design, production management, site production, and technical production. With such huge responsibility, professionals like Fons find WindPro Online to be an effective solution to ensure wind safety during events.

REAL-TIME WIND UPDATES FROM MULTIPLE SITES

During a busy weekend in July 2023, Fons deployed six WindPro devices to monitor wind conditions at six events happening simultaneously. Team members at different sites were able to remotely access wind data through WindPro Web Portal.

The WindPro Web Portal provides a comprehensive overview of historical wind data in charts and tables. With the unlimited data storage, it ensures continuous recording of wind parameters. Moreover, the web portal enables personnel to receive immediate high-wind alerts via email or browser notifications.

He further emphasized, "Even in moments of internet disruption, weather warnings remain accessible, making the machine invaluable." Which illustrates how the combination of the web portal and the physical tool truly enhances the power of WindPro Online.
